## DETAILED ACTION

### *Double Patenting*

Claims 1-10 of this application conflict with claims 1-10 of Application No. 09/945,350. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

### *Claim Rejections - 35 USC § 103*

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-10, 16-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boes et al. (Boes), U.S. Patent 5,807,494 in view of the Betz et al. (Betz), U.S. Patent 5,653,875.

The Boes patent discloses the formation of gel compositions having carbon with an organic group attached to the carbon (see Abstract). The groups are similar to those claimed (see columns 4 and 5).

The reference is silent on the use of the adsorbents in chromatography. The Betz patent is cited to teach the use of such use of carbon containing adsorbents in the chromatography (see columns 11, 12 and 16).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Boes patent with the teachings of the Betz patent, because the Betz patent teaches that carbon compounds can be used in chromatography.
